PROFILE

Third-year B.Tech CSE student building Java and Spring Boot backends, secure REST APIs, microservices, and AI application workflows. Project experience spans persistence, service communication, messaging, Docker environments, and validation-driven LLM integration; seeking backend/software engineering opportunities.

TECHNICAL SKILLS

Languages: Java, SQL, C, C++, JavaScript

Backend: Spring Boot, Spring Security / JWT, Spring Data JPA, Hibernate, REST APIs, transactions

Microservices: Spring Cloud Gateway, Eureka, OpenFeign, Config Server, Kafka, gRPC, Resilience4j

AI and Data: Spring AI, MCP, Ollama, structured LLM output, PostgreSQL / pgvector, H2

Tools: Git / GitHub, Maven, Docker, Docker Compose, AWS CDK, LocalStack, Linux; Micrometer / Zipkin

PROJECTS

VeriCV - Verifiable AI Resume Engine

Java 25, Spring Boot, Spring AI, Ollama, MCP, Pandoc / XeLaTeX

- Built a resume-and-job-description pipeline with structured JSON, source-grounded validation, targeted repair, and deterministic Markdown/PDF export.
- Added a local browser workflow and MCP tools for PDF ingestion, reusable candidate/job/result records, validated exports, and client- or provider-generated resumes.
- Implemented provider configuration and career chat with encrypted saved conversations, bounded context, and user-managed memory.

Commerce Circuit - Spring Cloud Microservices

Spring Boot, Spring Cloud Gateway, Eureka, OpenFeign, Config Server, PostgreSQL, Docker

- Developed Order and Inventory services with separate databases; connected order creation, stock reduction, cancellation, and stock restoration through OpenFeign.
- Added Gateway routing, Eureka discovery, Git-backed configuration, and refresh-scope experiments; explored Resilience4j failure handling and Micrometer/Zipkin tracing.

BookHaven - Hotel Booking Backend

Spring Boot, Spring Security, JWT, Spring Data JPA / Hibernate, PostgreSQL, Stripe

- Implemented JWT access/refresh tokens, BCrypt password hashing, and role-based authorization for booking and administration APIs.
- Built transactional booking and room-inventory flows, dynamic pricing strategies, and Stripe checkout/payment-webhook integration.

Patient Management System - Event-Driven Microservices

Spring Boot, Kafka, gRPC / Protocol Buffers, Docker Compose, PostgreSQL, AWS CDK, LocalStack

- Built and debugged a multi-module backend spanning Gateway, Auth, Patient, Billing, and Analytics; used Kafka events and synchronous gRPC calls, with AWS CDK/LocalStack infrastructure experiments.

PRACTICAL TRAINING AND PROBLEM SOLVING

JPMorgan Chase Software Engineering Job Simulation - Forage | January 2026

Practiced Kafka message consumption, JPA/H2 transaction persistence, external REST API integration, and balance-query endpoints with Maven-based verification.

DSA: Practicing arrays, hashing, two pointers, sorting, recursion, and binary search using Striver's sheet and coding platforms.

Credentials: Google Cloud AI Jam Studies - Top 50 (2024); Oracle University OCI / AI / DevOps certifications.

EDUCATION

B.Tech in Computer Science Engineering | Techno India University, Kolkata

2024-2028 | Third Year

B.D. Memorial International School | Class XII: 92% (2024) | Class X: 87% (2022)
